"A gene involved in quinate metabolism is specific to one DNA homology group of Xathomonas campestris.";

J. Appl. Microbiol. 87:649-658(199).

- CATALYTIC ACTIVITY: Quinate + pyrroloquinoline-quinone = 5-dehydroquinate + reduced pyrroloquinoline-quinone.

- COFCTOR: PACHWAY: QUINIC ACID CATABOLIC PATHWAY; FIRST STEP. THIS PATHWAY ALLOWS GROWTH OF BACTERIA WITH QUINATE BY ITS CONVERSION TO PROTOCATECHUATE AND SUBSEQUENT METABOLISM BY THE BETA-KETOADIPATE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       151 WSAYGNTDGGSRFAALDQINRSNGRPAAG---SPGPTTPGEIANSDGNGAEDQLTPLQ-- 205

Nuclear pore complex protein Nup98 (Nucleoporin Nup98) (98 kDa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Radu A., Moore M.S., Blobel G.;
"The peptide repeat domain of nucleoporin Nup98 functions as docking site in transport across the nuclear pore complex."; Cell 81:215-222(1995).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       THE TRANSPORT.
SUBCELLULAR LOCATION: Nuclear pore complex.
DOMAIN: CONTAINS G-L-F-C REPEATS.
PTM: THE N-TERMINUS IS BLOCKED.
SIMILARITY: BELONGS TO THE GLFG FAMILY OF NUCLEOPORINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             6B1F108C7390307A CRC64;

Cel B5 extends from amino acid A1011 to P1424 or K1425 or N1426, and Cel B4/5 extends from amino acid A1012 in the sequence shown in AAV13492; Cel E1 extends from amino acid V39 to D481, Cel E1/2 extends from Y39 to G812, Cel E6 extends from y39 to G812, Cel E6 extends from wino acid V1233 to K1751 and the stability region extends from amino acid V1233 to the sequence shown in AAX13493; Cel E3/B5 is shown in AAX13494. The new enzymes are useful in laundry detergent compositions to prevent or
                                                                                                                                                                                                                                                                                      E1/2;
                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                   61
gene (obtd. from Aeromonas) into pUC18. The protein has amol. wt. of 81,000 (SDS-PAGE) and an optimum pH near to 5 when carboxymethylcellulose is the substrate. The N-terminal sequence: GIHADThas been confirmed by Edman degradation. The gene can be used to produce recombinant enzyme which is used for the effective utilisation of biomass resources and the mfr. of pharmaceuticals and foodstuffs, and also for the detergent and deinking of waste paper.
                                                                                                                                                                                                                                                                 2 SGGVKVQYKNNDSAPGDNQIKPGLQLVNTGSSSVDLSTVTVRYWFTRDGGSSTLVYNCDW

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           proteinases of native thermobilic and alkalinophilic origin, comprising the truncated sequences Cel B5, Cel B4/5, Cel E1, Cel E1/2, Cel 1/2/3, Cel 6 or Cel E3/9E, or a stability region from one of the defined full-length sequences, or functional equivalents. Cel B5 extends from amino acid A1011 to P1424 or K1425 or N1426, and Cel B4/5 extends from amino acid K635 to N1426 in the sequence shown in AAY1349; Cel E1 extends from amino acid X195 to D481. Cel E1/2 extends from X39 to G635. Cel E1/2/3 extends from Y39 to G812. Cel E6 extends from A79 to G635. Lel E1/2/3 extends from X39 to G812. Cel E6 extends from amino acid V1233 to the sequence shown in AAX13493; Cel E6 extends from amino acid V1233 to the sequence shown in AAX13493; Cel E3/55 is shown in AAX13494. The new enzymes are useful in laundry detergent compositions to prevent or remove staining, backstaining or graying, for use on cellulosic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a recombinant cellulase active protein free of
remove staining, backstaining or graying, for use on cellulosic materials including cotton-containing fabrics. They are especially use for preventing redeposition of colorant during stonewashing, and for processing of textiles where cellulose breakdown is required. The new truncated enzymes show reduced redeposition of dye compared to using non-truncated cellulase compositions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cellulase; proteinase; truncated; Cel B5; Cel B4/5; Cel E1; Cel E1/2; Cel 1/2/3; Cel 6; Cel E3/B5; laundry detergent; stain-removing; cotton-containing fabric; stonewashing.
                                                                                                                                                                                                                             Gaps

The invention relates to a recombinant cellulase active protein free of proteinases of native thermophilic and alkalinophilic origin, comprising the truncated sequences Cel B5, Cel B4/5, Cel E1/2, Cel E1/2/3, Cel E1/2, Cel E1/
                                                                                                                                                                                                                                                                                                Η;
materials including cotton-containing fabrics. They are especially useful for preventing redeposition of colorant during stonewashing, and for processing of textiles where cellulose breakdown is required. The new truncated enzymes show reduced redeposition of dye compared to using non-truncated cellulase compositions.
                                                                                                                                                                                                                                                                                                                                                                            Cel B4/5; Cel E1; Cel E1/2;

                                                                                                                                                                         for preventing redeposition of colorant during stonewashing, and for processing of textiles where cellulose breakdown is required. The new truncated enzymes show reduced redeposition of dye compared to using non-truncated cellulase compositions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequences (AAQ49818-19) consist of two synthetic fragments which are used to induce a mutation within the cellulase NK-1 gene. The gene is shown in sequence (AAQ49820). The modified NK-1 gene shows a change in pH dependence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               4 GVKVQYKNNDSAPGDNQIKPGLQLVNTGSSSVDLSTVTVRYWF-TRDGGSSTLVYNCDWA 62

Endo 3 can be used in novel method of forming localised colour density variation on the surface of a dyed cellulosic fabric. The method comprises agitating the fabric in an aqueous medium (PH 6.5 to 9.0) containing a family 5 cellulose.

1.4 cellobioside, or a family 7 cellulase, and a mechanical abrading agent or cellulose having abrading activity. Each cellulase displays 30 % or more of its maximum activity at ph 7. The process is useful to provide a stone washed look to blue jeans
                                                                                                                                                                                                                                                                                                                                                                                       Endoglucanase; Endo 3A; formation; localised; variation; colour density; surface; dye; fabric; family 5; cellulose; hydrolysation; p-nitrophenyl-beta-1,4-cellobioside; stone wash; blue jeans; back staining.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Localised variation of colour density in the surface of a dyed cellulosic fabric - uses cellulase compsn. able to hydrolyse

It is especially useful as a cellulolytic agent and has been found to be more stable during washing (60 mins. at 40 deg.) in the presence of conventional detergents than a commercial cellulase preparation. It may also show increased storage stability in lig. detergents contg. proteases. The sequence was deduced from the DNA (AAQ13001). See also AAR13228 and AAR13229.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Enzyme exhibiting cellulase activity from Bacillus sp. - is an endo-glucanase, esp. useful for harshness redn. of cotton-contg.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ,

                                                                                                                                                                                                                                                                                                                                                                   A modified cellulose binding domain (CBD) or fraction of it, linked to a hapten moiety via one or more Cys or Lys residues and complexes comprising the biotinylated CBD and a biotin-binding molecule selected from modified or unmodified avidin or streptividin or an anti-biotin antibody, can be used in affinity chromatography, cell separation, cell, protein and enzyme immobilisation, selective removal of bological materials, multienzyme reactors, signal immunoassays and drug (e.g. pesticide) delivery. The CBD molecule can be modified with the hapten without affecting its high affinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 VSGGVKVQYKNNDSAPGDNQIKPGLQLVNTGSSSVDLSTVTVRYWFTRDGGSSTLVYNCD 60

Mannanase (also known as mannan endo-1,4-beta-mannosidase, beta-mannanase, or endo-1,4-mannanase) hydrolyses galactomannans. Specifically, mannanases hydrolyses labortomannans. Specifically, mannanases hydrolyse and galactomannans. The mannanase protein, or preparations and galactoglucomannans. The mannanase protein, or preparations containing it, are used to improve properties of cellulosic or synthetic fibres, yarn or (non)wown fabrics (removal of mannan-based sizes or printing pastes). They are also used to degrade or modify plant materials (particularly recycled waste paper, paper making pulps, or material containing quar or locust bean gums (thickeners), or to reduce viscosity of mannan-containing foods or feeds). The mannanases are also used to process coffee extracts (to inhibit gel formation); in cleaning compositions (for machine washing of fabrics, as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             hard-surface cleaners, for hand or machine dishwashing, also in oral, dental, contact lens or body-care compositions) where they remove mannan-containing soils and prevent binding of some soils to cellulosics; and in fabric softeners. They can also be used in oil well drilling to fracture subterranean formations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a mannanase-linker-cellulose binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New mannanases for treatment of textiles, plant material and coffee

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           plasmid pMB914 was constructed using pectate lyase gene from
Bacillus licheniformis, ATCC 14580 and cellulose binding domain (CBD)
gene from clostridium thermocellum YS fused with a linker molecule.
Bacillus subtilis was transformed with plasmid pMB914 for expression of
the fusion protein. Pectate lyase can be used in detergent compositions,
for cleaning hard surfaces, for machine treatment of fabrics, for
improving the properties of cellulosic fibres, yarn, woven or non-woven
fabric, for the degradation of plant material e.g. recycled waste paper,
mechanical paper-making pulps or fibres subjected to retting process, for
preparing animal feed and for processing wine or juice.
                                                                                                                                                                                                                                                                                                                        Pectate lyase-linker-CBD fusion protein; ATCC 14580; plasmid pMB914; cellulose binding domain; CBD; linker; transformed; detergent; cellulosic fibre; yarn; degradation; recycled waste paper; animal feed; paper-making pulp; retting process; processing; wine; juice.

The pectate lyase enzymes are obtained from Bacillus agaradhaerens (BA), Bacillus licheniformis (BL), Bacillus halodurans (BH) and other Bacillus species. The pectate lyase enzymes can be used for degrading pectin, pectate and polygalacturonides. They can be used in detergent compositions, for cleaning hard surfaces, for machine treatment of fabrics, for improving the properties of cellulosic fibres, yarn, woven or non-woven fabric, for the degradation of plant material (e.g. recycled waste paper, mechanical paper-making pulps or fibres subjected to a retting process, for preparing animal feed or for processing wine or juice. DNA encoding the enzymes can also be used for the production of transgenic plants.

This protein sequence represents a scaffoldin based on the CipA protein of Clostridium thermocellum. The scaffoldin protein is used in a novel composition that comprises at least 2 enzymes non-covalently bound to a peptide backbone (i.e. present sequence). The scaffoldin comprises a number of internal repeating units and at least one cellulose binding domain (CBD). The CBD may be altered to modify its affinity for cellulose, which may be desirable where cellulose binding would be disadvantageous. The enzyme is bound to the scaffoldin by a dockerin cellulose, which binds to a repeating element of the capton of the enzyme, which binds to a repeating element of the scaffolding. The dockerin is preferably Cels (AAM1523) or Celb scaffolding. The dockerin is preferably Cels (AAM1523) or Celb (AAM15236). The composition can be used in reducing allergenicity, producing synergistic effects, and facilitating selective modification of substrate. By taking advantage of the cellulose binding domain of the scaffolding domain, it is possible to recover enzymes, or to quantify the amount of an enzyme delivery system which could be used in the food industry, in food processing, animal feed, textiles, bioconversion, pulp and paper production, plant protection and pest control, as a wood control, as a wood control or control, as a wood control or control or control or control or control or control or control c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Composition with enzymes non-covalently bound to a peptide backbone - used as a multi-enzyme delivery system, e.g. in food processing,

Multimeric protein, especially enzymatic, complexes are held together by protein protein interactions between domains designated dockerins and cohesins, which are found on the catalytic and scaffold subunits respectively. An example of such a complex is the cellulose degrading protein complex from Clostridium thermocellum, known as the cellulosome. This complex comprises around 15 protein fainluding endoglucanses, cellobiohydratases, hemicellulases, e.g. xylanases or lichinases, which interact with a central "scaffold" protein designated the cellulosome interact with the cip subunit via conserved 23 amino acid dockerin domains. Cip has been shown to contain 9 copies of a cohesin domain. The invention relates to the isolation of proteins blading to a novel dockerin type domain found in the C-terminal portion of Cip. The new domain is designated a type II dockerin domain (as compared to the type II dockerin domains.) The store on the catalytic subunits of the cellulosome). The type II dockerin domains.

The sequence presented here is the cellulosome integrating protein to sequence similarity to the type II dockerins but is unable to bind type I cohesin domains.

The sequence presented here is the cellulosome integrating protein to bind type I cohesin domains.

The sequence presented here is the cellulosome integrating protein bund at the C-terminal dockerin type II domain (location not given in specification). The novel type II dockerin and cohesin domains can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Multimer; enzyme; complex; protein-protein interaction; dockerin domain; cohesin domain; catalytic subunit; scaffold subunit; SdbA; synergistic; cellulosome integrating protein; scaffoldin dockerin binding protein.

The enzyme exhibits high performance in detergent compositions and prevents binding of certain soils to the xyloglucan left in the cellulosic material. It is stable at pH 5-10 at room temperature and has a half life of more than 50 days when incubated in a full formulated liquid detergent at 30 plus degrees celsius. The enzyme is used in detergent compositions, textile industry for improving the properties of cellulosic fibers, yann, and woven or non-woven fabrics, preferably in textile scouring process, and in cellulose fiber propersing industry for ratting of fibers e.g. hemp, jute, flax, and
                                                                                                                                                                             The present sequence represents a xyloglucanase of the invention. The

The enzyme exhibits high performance in detergent compositions and prevents binding of certain soils to the xyloglucan left in the cellulosic material. It is stable at pH 5-10 at noom temperature and has a half life of more than 50 days when incubated in a full formulated liquid detergent at 30 plus degrees celsius. The enzyme is used in detergent compositions, textile industry for improving the properties of cellulosic fibers, yann, and woven or non-woven fabrics, preferably in textile scouring process, and in cellulose fiber processing industry for ratting of fibers e.g. hemp, jute, flax, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a xyloglucanase of the invention. The
